Introduction

About Me

I am Gilles Ferrero, a senior software engineer and director of engineering specializing in Natural Language Processing (NLP), Machine Learning (ML) and Artificial Intelligence (AI) applications for business. With over 28 years of experience in the Software R&D Industry, I have developed numerous solutions for Fortune 500 companies and startups alike.

Expertise

My current R&D works focuses on developing novel approaches to text classification, sentiment analysis, and entity recognition. I hold a Master of Science in Computer Science from Telecom Nancy University in France.

Previous Work

I've successfully implemented NLP solutions across various domains including:

- B2C: Web page filtering classifiers to protect minors on the internet
- Telco: Server based content classifiers for content classification at core network levels
- ECommerce: Chat request classifier/router to support end customers
- Retail: Sentiment & Customer feedback analysis over product recommendations

My Approach

Each project begins with a thorough understanding of the business problem, followed by data exploration and prototype development. I prioritize interpretable models that provide not just accurate predictions, but actionable insights that drive business value.

The analysis presented in this report follows my methodical approach to model development, rigorously testing multiple architectures to identify the optimal solution for your specific use case.

Query Router Model Comparison

This document presents a comparative analysis of different transformer models for query routing. We evaluate several models and present their performance metrics, confusion matrices, and incorrect classification examples.

Dataset and Topics

Loaded 38 topics from 5 categories

Loaded 485 queries from the dataset with occasional typos

Note: These queries are AI generated based on topics.yaml, in no case it can represent real user requests.

Sample below

query	category	subcategory
how much should I water my lawn in july?	Yard guidance	Watering
when is best time to fertilize my lawn	Yard guidance	Fertilizer timing
my grass has yellow patches what do i do	Yard guidance	Spots or patches
how to use dandelion doom?	Sunday products	Instructions
		Discounts and transactions
do you have any promotions right now	Subscription	
can you help me cancel my plan please	Cancel	Cancel
how to contact customer service	Other	Customer service agent
best time to seed my lawn in pennsylvania	Yard guidance	Seeding
how do i aerate my lawn	Yard guidance	Aerification
when should I mow after applying fertilizer	Yard guidance	Mowing
my sprayer isnt working properly	Sunday products	Sprayer
		Discounts and transactions
can you help me with checkout problem	Subscription	
how to get rid of crabgrass in my yard	Yard guidance	Weed control
do i need to water after applying weed warrior	Sunday products	Instructions
	when will they be ready?	Sunday products
missing my soil test results		
what should i do to prepare lawn for winter	Yard guidance	Seasonal changes
is it safe for my dog to walk on lawn after treatment	Sunday products	Safety
		Discounts and transactions
can i get a discount for next year	Subscription	
i want to talk to a real person	Other	Customer service agent
		Discounts and transactions
how do I update my payment info	Subscription	
dandelions all over my yard help!	Yard guidance	Weed control

Model: bert-base-uncased

Evaluating model: bert-base-uncased

Generated embeddings with shape: (38, 768) for topics

Confusion Matrix

The following confusion matrix shows the distribution of true vs predicted categories:

Performance Metrics

The following metrics summarize the model's performance:

Metric	Value
Accuracy	0.7629
Precision	0.7781
Recall	0.7629
F1 Score	0.7465
Time to Classify First 10 Entries	1.1775 seconds
Time to Classify Last 10 Entries	1.0149 seconds
Queries per Second	9.85

Model: prajjwal1/bert-mini

Evaluating model: prajjwal1/bert-mini

Generated embeddings with shape: (38, 256) for topics

Confusion Matrix

The following confusion matrix shows the distribution of true vs predicted categories:

Performance Metrics

The following metrics summarize the model's performance:

Metric	Value
Accuracy	0.7216
Precision	0.8100
Recall	0.7216
F1 Score	0.7190
Time to Classify First 10 Entries	0.1858 seconds
Time to Classify Last 10 Entries	0.1747 seconds
Queries per Second	57.25

Model: all-MiniLM-L6-v2

Evaluating model: all-MiniLM-L6-v2

Generated embeddings with shape: (38, 384) for topics

Confusion Matrix

The following confusion matrix shows the distribution of true vs predicted categories:

Performance Metrics

The following metrics summarize the model's performance:

Metric	Value
Accuracy	0.8351
Precision	0.8378
Recall	0.8351
F1 Score	0.8322
Time to Classify First 10 Entries	0.2591 seconds
Time to Classify Last 10 Entries	0.2351 seconds
Queries per Second	42.53

Model Comparison

The following table compares the performance of all tested models:

Model	Accuracy	Precision	Recall	F1 Score	Time (First 10)	Time (Last 10)	Req/Sec.
bert-base-uncased	0.7629	0.7781	0.7629	0.7465	1.1775s	1.0149s	9.85
prajjwal1/bert-mini	0.7216	0.8100	0.7216	0.7190	0.1858s	0.1747s	57.25
all-MiniLM-L6-v2	0.8351	0.8378	0.8351	0.8322	0.2591s	0.2351s	42.53

The following spider chart visualizes the performance of all models:

Queries/Second: Number of entries that can be processed in 1 second.

Note: The graph incorrectly plots the Queries/Second dimension

What comes next

Reality check: Despite the qualified AI Generated dataset, this teaser works needs the actual data to have an actual comparison.

Alignment: We should meet over this, your expectations, your own trials, the why and business purpose behind the router, your priorities ...

Different Trials: Each description may also be split with "," to try categorization at unitary intention level or at clustered intention level.

Optimizations: The topics.yaml file contains elements worth discussing toward the end.

Many more things can be tried after we meet.

Incorrect Classifications

Annexes

Glossary

Accuracy - The overall proportion of correct predictions (both true positives and true negatives) over the total number of predictions.

Precision (Positive Predictive Value) - The proportion of true positive predictions among all positive predictions. Shows how reliable positive classifications are.

Recall (Sensitivity, True Positive Rate) - The proportion of actual positives that were correctly identified. Shows how well the classifier finds all positive cases.

F1 Score - The harmonic mean of precision and recall, providing a balance between the two, especially useful for imbalanced datasets.

Area Under ROC Curve (AUC-ROC) - Measures the classifier's ability to discriminate between classes across various thresholds.

Confusion Matrix - A table showing true positives, false positives, true negatives, and false negatives.

Specificity (True Negative Rate) - The proportion of actual negatives correctly identified.

False Positive Rate - The proportion of actual negatives incorrectly classified as positive.

Classification Threshold - The decision boundary used to determine class assignment.

Class Distribution - Information about the balance or imbalance of classes in your dataset.

Model Confidence/Probability Scores - The probability estimates for predictions rather than just the final classifications.

Training/Testing Performance Gap - Indicates potential overfitting or underfitting.

Feature Importance - Which features have the greatest impact on classification outcomes.

Cross-Validation Results - Performance metrics across multiple data splits.
